

Final Project

Perform below task for your final project:

1. Create one website for a business/school at your choices.
2. Describe what are you trying to achieve through this website and who is the target audience for this webpage.
3. Implement CSS Elements for all pages included in the navigation bar. At least 5 pages implemented.
4. Create this webpage responsive design so it can be access from every device.
5. Include forms, links images and tables in your webpage.
6. Integrate videos and audios.
7. Use the HTML 5 figure, fig caption, section, article, and aside semantic elements. Add these elements to the webpages in the website.
8. Use a CSS grid layout to create multiple columns. Create style rules to add opacity, box shadows, and text shadows. Add a favicon to a website.
9. Validate your code.
10. Prepare for a presentation 10-15 mins.
